WHERE CODE
BECOMES CULTURE

An Unfinished Body

Qilin Zhang

> **An Unfinished Body is an installation of five screens.**

On four surrounding screens, the artist's own body is **reshaped through AI**: limbs and heads graft onto one another, rendered in the language of ink rubbing as a mechanised body of the future.

At the centre, a real-time interactive projection invites viewers to tear open the darkness and step into white light. There, the more one moves, the more thoughts gather; **only stillness** lets them disperse into emptiness.

Around the edges, the body keeps accumulating; at the centre, it is taken away. The work sets technology's fantasy of augmentation beside the **possibility of letting go.**

WHERE CODE BECOMES CULTURE

8 Out of 10 Comments

Jason Boomer

> **8 Out of 10 Comments presents anonymised posts from the social platform Reddit.com, and it is your goal to try and guess whether other Reddit users liked or disliked the post.**

Sentiment Analysis has been performed on all posts, labelling keywords and the whole post as "positive", "neutral", or "negative". This tells us the emotion or feeling represented by those words, but **not how other Reddit users felt** about the post.

The posts' Score is the sum of Upvotes (likes) and Downvotes (dislikes) given by other Reddit users, however it will remain hidden while you cast your vote. After votes have been cast by putting an Upvote or Downvote token into the corresponding slot, the **Score and context of the post will be revealed!**

How closely do you agree with the wider community? Given the added context, would you change your vote? What implications does this have for automated moderation using machine learning?

WHERE CODE BECOMES CULTURE

Metamorphisis of a Living

Zohreh Baghban

> **This large-scale, tapestry-style collage draws inspiration from the seamless, mathematical transitions of M.C. Escher.**

It traces a singular, relentless metamorphosis: the **journey of a sheep** through the industrial machinery of the meat industry - from a living being to a packaged fleshly entity
to the "messmate" on a table.

By blurring the boundaries between human/nonhuman, the work seeks to challenge the "detachment" inherent in modern food systems. It aims to collapse the distance between the consumer and the source, replacing industrial abstraction with a textured reality. Through the language of collage, the installation explores the tension between **life and consumption**, asking the viewer to look closely at the complex connections we often choose to ignore.

Listen, Scoundrels!

Sean Carroll

Listen, Scoundrels!

Listen, Scoundrels! revisits the radical beginnings of computer art through the pages of PAGE, the magazine of the Computer Arts Society.

Using artificial intelligence to explore the archive, the exhibition uncovers overlooked voices and critical debates about art, technology, **politics and power**. Its title comes from a poem by Vladimir Mayakovsky, placed on the cover of PAGE in 1970 by artist Gustav Metzger.

Through twenty collaged prints, historical texts are brought into new conversations, revealing how early computer artists questioned the military, industrial and institutional forces shaping technology.

The exhibition asks us to listen again to these voices and consider what their questions mean for our relationship with technology today.

WHERE CODE BECOMES CULTURE

Machinima: Beyond the Digital Screen

Sophie Determan

> **I'm a film curator looking to develop new methods for exhibiting machinima for public audiences.**

"**Machinima**" is a portmanteau of machine + cinema, and refers to the art of creating **real-time animation using video game engines**. Machinima creators, or "machinimators," use pre-rendered character models and assets to tell a story -- leading to conversations about online culture and the transformative nature of fan works. This exhibition will explore machinima created using the Source Filmmaker engine, developed by Valve Corporation for the videogame "Team Fortress 2."

This installation will explore the history of Source Filmmaker machinima as a branch of digital arts and explain how **production methods, gameplay, and community** all shape the way the machinima is created and understood.

MetaFlower - The Kiri

David C. Hughes

Mixed reality XR theatre piece inspired by Noh theatre and Funabenkei, using Unity, MR and volumetric/depth capture.

Visitors wear a Meta Quest headset, sit in a 'boat' and may walk around the 3D environment.

Metaverse Experiences for Museum Tourism: Exploring the Concept of Persistence

Wen Zhang

> **A museum tourism and cultural heritage metaverse project inspired by Leicester's Jewry Wall Museum,**

exploring persistence as a key metaverse concept through **seasonal transformation**, **environmental storytelling**, animation, augmented reality and digital visual design.

Image: 3D design and rendering by Wen Zhang, created in Blender with AI-assisted compositing.

Plenography: a new medium

Taliesin Stokes

> **An interactive exhibit displaying 4-dimensional digital imagery, using head tracking, 3D glasses, and a laser projector.**

The intention is to closely track the sensation of **being present at the time and place** where the imagery was captured.

From Spectators to Co-Creators: Designing Social XR with Generative AI

Timothi Lim

> **What happens when an immersive artwork does not just ask you to watch, but asks you to work things out with strangers?**

Social XR is an interactive installation by Timothi Lim that explores how Extended Reality (XR) and generative AI can help people cooperate in shared physical spaces. Participants step into a tracked interaction area and respond to audiovisual cues - such as light, sound, symbols and spatial prompts - that adapt to how the group moves together. **There are no headsets, handheld controllers or wearable sensors.** Instead, **the room itself becomes the interface.**

The project asks a simple public question: can emerging technology bring people together rather than isolate them? Through playful spatial puzzles, Social XR studies the moment audiences stop being spectators and begin acting as **co-creators of a shared experience.**

WHERE CODE BECOMES CULTURE

Where a tool ends and a ritual begins...

Atsushi Yang

Every tool has a job.

A mug carries a moment of pause. A notebook holds what has passed and reaches toward what might come. A bow launches an arrow. But look closer at the moments surrounding these acts — the teabag hung just so on the rim, the first mark drawn before writing begins, the slow drawing of a bow before release — and something shifts, as **meaning settles into the gesture** and changes its weight. The object's nature hasn't changed. The function hasn't changed. Yet the action feels different: measured, repeated, charged with a meaning that exceeds mere use.

Where a Tool Ends and a Ritual Begins sits with that shift.

This work is the opening inquiry of a design research project exploring what makes certain everyday activities sustaining rather than simply useful. A ritual, as used here, is not a ceremony or religious act — it is a repeated, embodied action that a person loads with personal meaning, one that marks time, focuses attention, or quietly declares who they are. **Tools and rituals are not opposites.** They are neighbours, and the boundary between them is not fixed.

The objects on display are chosen to make that boundary visible. In each pair, near-identical gestures carry vastly different weights. One pair is casual and improvised. The other is deliberate and inherited. **Yet the ritual object** in each pair does something more than the tool beside it.

The question this exhibition sits with is a design question: if the same gesture can be tool-use or ritual depending on context and intention, what does that mean for **how we design the objects and systems** people live with every day?
